KILL DA VIRUS

A professional virus killer that recognises more than 138 viruses

Features:

- * Three versions included from a title bar clock version through a custom screen 3D gadget version (KDV5).
- * Brainfile which is being updated through PD channels and of course on Newsflash so you will always have an updated version.
- * Stores your bootblock on disk so it can be restored when your bootblock is destroyed by a nasty boot virus (Saddam etc).
- * Checks your memory and will kill any active virus to avoid further spreading onto healthy disks. Any unknown bootblock will be analysed with a 'learn' option so next time it can be identified.
- * User friendly menus that are easy to work with.
- * Full support of Kickstart 2.0 and hard disks.

POWERPACKER PROFESSIONAL V4.0

You can't pump up a disk, but with **POWERPACKER** you can compress its contents into less than two thirds of the space otherwise required for storage - on a floppy disc or hard drive.

POWERPACKER uses sophisticated 'crunching' algorithms to reduce the size of files, allowing an average of 40% more material to be stored on the medium of your choice.

POWERPACKED programs load "auto-decrunch" and run.

powerpacker includes several freely distributable utilities which access packed files without decrunching:

PPMORE A screen text reader with options for string search and sending an on-screen image to a graphics printer.

PPANIM plays a crunched animation file.

PPTYPE formats a crunched text file to the printer, including pagination and perforation skips.

Plus DECRUNCH, a utility that restores files to original sizes.
